Read the given passage and answer the questions that follow.

A recent report by the United Nations' Food and Agriculture Organization (FAO), Duke University and WorldFish found that small-scale fisheries account for 40% of the global fishery catch. Between 2013 and 2017, Asia contributed approximately 23 of the 37 million tonnes caught, highlighting the importance of such enterprises for livelihoods and nutrition, particularly in Asia and for women. The fishing in this sector involves low-tech and low-cost family or community fishing along the coast and rivers with the catch most commonly sold in local markets. The report is the most comprehensive look at small-scale fisheries, based on data from 58 countries and territories, and involving 800 researchers, government officials, and consultants.

The study found that the average economic value of annual landings from 2013 to 2017 was almost US\$77.2 billion globally, or 49% more than in the first study conducted in 2012. The small-scale fisheries generated about 44% of the total economic value of catches in the countries surveyed. In India, small-scale fishing generates an average annual landing value between \$1-4.3 billion, compared to over \$4.3 billion in the US. It is estimated that around 10-25% of the marine catch comes from small-scale fisheries.

Small-scale fisheries account for nearly 90% of global fisheries employment, with 60.2 million people employed full-time in the value chain in 2016, compared to 7.3 million in large-scale fisheries. These estimates were extrapolated from 78 national household surveys. China leads the industry with 35.5 million people employed in the sector, followed by India with 13.1 million. The sector is also a significant employer for women, with an estimated 44.7 million women participating in value chains or engaged in livelihood activities related to the sector, representing 40% of people involved in the sector.

SubQuestion No: 22

Q.22 Which of the following is NOT true about the small-scale fishery in Asia?

Ans

√ 1. Fishing is normally carried out in high seas.

X 2. The catch is commonly sold in the local market.

X 3. A large number of women are engaged in the small-scale fishery sector.

X 4. It is a low tech and low cost activity.

SubQuestion No: 23

Q.23 Based on the given passage which of the following statements is correct?

Ans

X 1. Small-scale fisheries account for a meager portion (40%) of the global fishery catch.

X 2. Small-scale fisheries are trivial for livelihoods and nutrition, especially in Asia and for women.

X 3. These fisheries typically involve low-tech, low-cost family or private angling, with most of the catch being sold in local markets.

√ 4. Asia, particularly, has a vital contribution to small-scale fisheries, with approximately
23 million tonnes caught between 2013 and 2017.
