Comprehension:

Read the given passage and answer the question that follows.

'AI (Artificial Intelligence) has come to be accepted as a boon for the next century. Everyone is going gaga over its capabilities and potential to make life easier and comfortable. But there is a need to pause and reflect on its flip side as well. Personalised feedback and instant answers might give a magical experience to students using ChatGPT, but where are they heading? They are acquiring the incapability to seek answers on their own, a lack of curiosity to explore, sitting on their couch for someone else to solve their problems. Is it correct? With the world getting more and more automised, there will be a rise in mental health disorders. Lack of social interactions, true companionship, a shoulder to pour out all sorts of mixed, confused feelings and emotions will create individuals who are like Facebook profiles—beautiful, appealing from outside but broken from inside. This dichotomy between the inner self and outer self will churn complex personalities, which is not healthy and promising for the future of this world. The students need a human touch.
